

REAL Fighter Rankings: pre-submission review package

Prepared September 30, 2026 for an independent methodology and submission-readiness review. Author: Brayton Smith, PhD, MBA (independent; Marion, Indiana). Everything in this package is generated from the public repository and can be reproduced with `PYTHONPATH=src python3 -m mmalab.run_all`.

0. Key facts for the reviewer

- Target venue: MIT Sloan Sports Analytics Conference 2027 (SSAC27), Research Paper Competition, Other Sports track. Conference Feb 25-26, 2027, Boston.
- Abstract deadline: October 1, 2026, 11:59 pm Eastern. Full paper requests late October 2026; full paper due December 4, 2026 if invited.
- Abstract rules (from the SSAC page): under 500 words including title and body; sections Introduction, Methods, Results, Conclusion; up to two combined tables or figures; a link to a public GitHub (or other open) repository with the data is required; code encouraged. Abstracts are judged on novelty, academic rigor and impact.
- Repository: <https://github.com/braytonsmith-dev/mma-lab> (rename to `real-fighter-rankings` pending; GitHub forwards old links). Live site: <https://braytonsmith-dev.github.io/mma-lab/> with `methodology.html`, `prediction.html` and `favorites.html`.
- Data: 8,911 UFC bouts, 1994-03-11 to 2026-09-26, from UFCStats via an open scraper; official UFC media-panel rankings history (every release Feb 2013 to June 2026) for opponent rank at fight time; closing odds Nov 2014 to Dec 2023 for the market comparison.
- Two separate models: (1) a predictive performance-adjusted Elo, validated out of sample, used for the abstract's prediction claims and the card-quality index; (2) the REAL resume board (v1.0, frozen Oct 1, 2026), which is the public ranking product and is described in the abstract's conclusion.

1. The abstract as it will be submitted (497 words including title)

Performance-Adjusted Elo for Mixed Martial Arts: In-Fight Statistics Improve UFC Rankings and Measure the Card-Quality Gap

Track: Other Sports. Author: Brayton Smith, PhD, MBA. Repository: <https://github.com/braytonsmith-dev/real-fighter-rankings>

Introduction

In June 2026 the UFC began replacing its media-voted rankings with an Elo-style model built with Meta that uses results, opponent quality, and recency. Two questions decide whether a data-driven ranking deserves trust: does it predict outcomes, and what does it reveal about matchmaking? We build an open, reproducible rating system from public UFCStats data, test whether round-level statistics improve on results-only Elo, and measure how ranked-versus-ranked bouts are distributed across the promotion's 43-event calendar.

Methods

Data: 8,911 UFC bouts from March 1994 to September 2026 with round-level statistics for 99.8%. Classic Elo updates on the binary result. Performance-adjusted Elo replaces the result with a blend of the result and a logistic transform of a per-minute dominance differential (significant strikes, knockdowns weighted 5, takedowns 2, submission attempts 2, control time), with a floor so a win never scores below 0.5. Both variants use a larger K for a fighter's first five UFC bouts and regression toward the mean after layoffs longer than a year. All parameters were chosen by grid search on 2010-2019 bouts (log loss) and evaluated once on 3,390 held-out 2020-2026 bouts. Ratings were also compared with de-vigged closing odds

on 3,499 matched bouts (2014-2023). For every event since 2022, each fighter was positioned within their division among fighters active in the prior 18 months by pre-fight rating, and a bout was tagged "top 10" when both fighters sat inside positions 1-11 (champion plus ten).

Results

Table 1 summarizes prediction. Performance adjustment lowers held-out log loss from 0.674 to 0.662 and raises accuracy from 58.1% to 61.2%; a 90% weight on dominance is optimal, and finish multipliers add nothing once dominance is included. The betting market remains stronger (0.616, 65.2%), so the model is a ranking instrument rather than a betting edge. Figure 1 shows the card-quality index: 203 cards from 2022 through September 2026 average 1.2 top-10 bouts each, numbered events 2.2 and Fight Nights 0.7, and 31% to 54% of Fight Nights carry none. Supply binds before scheduling does: fighters who begin a year inside a top 11 average 1.3 to 1.4 bouts that year, 12% to 16% do not compete at all (2022-2025), and 58% to 62% of their bouts are already against another top-11 opponent, which caps the achievable number of ranked bouts near 50 per year.

Conclusion

Round-level statistics carry ranking information that results alone miss. We pair the predictive model with REAL Fighter Rankings, a weekly resume board that values each win by the opponent's official rank at fight time, blends judges' cards with fight statistics, and publishes an audit trail for every placement. The card-quality index confirms the "stacked card" complaint but bounds the remedy: with roughly 50 ranked-versus-ranked bouts available per year, redistribution across 43 cards, not more matchups, is the actionable lever. Code, data, and weekly boards are open source at the repository above.

Table 1 to be attached (from outputs/table_backtest.md):

Model	Log loss, tune 2010-19	Log loss, test 2020-26	Brier, test	Accuracy, test
Coin flip	-	0.6931	-	50.0%
Classic Elo, untuned (K=32)	0.6849	0.6838	0.2454	56.5%
Classic Elo, tuned (results only)	0.6801	0.674	0.2406	58.1%
Performance-adjusted Elo, tuned	0.6639	0.6631	0.2352	60.6%
Performance-adjusted Elo, interpretable (win/finish floors)	0.6675	0.6621	0.2347	61.2%

Test bouts: 3,390. Tuning bouts: 4,116.

Same-bout comparison against the closing betting market (de-vigged), 3,499 bouts, 2014-11-07 to 2023-12-16:

Model	Log loss	Brier	Accuracy
Performance-adjusted Elo	0.6683	0.2376	59.6%
Betting market	0.6159	0.2139	65.2%
50/50 blend	0.6319	0.2205	64.9%

Figure 1 to be attached: fig_card_quality.png (top-10 vs top-10 bouts per card and share of cards with none, numbered vs Fight Night, 2022-2026). Figure 2 (optional, if the two-visual limit allows a table plus one figure only, this one is dropped): fig_backtest.png (log loss by year with the held-out window shaded, and a calibration plot).

2. Prediction model: full backtest report

Protocol: warm-up 1994-2009 (ratings accumulate, never scored); tuning 2010-2019 (grid search on log loss); test 2020-2026 (scored once with the tuned parameters). Market comparison on the same bouts, de-vigged closing odds.

Held-out log loss by year (predictive model, 2015 on; 2020-2026 is the test window):

date	n	log_loss	brier	accuracy
2015	464	0.6606	0.2339	0.6034

date	n	log_loss	brier	accuracy
2016	483	0.6604	0.2337	0.6087
2017	446	0.6624	0.235	0.5919
2018	469	0.6646	0.2359	0.5991
2019	506	0.6817	0.2445	0.5455
2020	444	0.6679	0.2369	0.6104
2021	497	0.672	0.2392	0.6097
2022	506	0.6642	0.2358	0.6008
2023	504	0.6708	0.2393	0.5833
2024	513	0.6583	0.2332	0.6023
2025	515	0.6517	0.23	0.6252
2026	411	0.6568	0.232	0.6083

Calibration on the 2020-2026 test bouts (predicted vs observed win rate by bin):

bin	n	predicted	actual
(0.1, 0.2]	4	0.1645	0.5
(0.2, 0.3]	51	0.271063	0.352941
(0.3, 0.4]	344	0.361346	0.430233
(0.4, 0.5]	961	0.460165	0.473465
(0.5, 0.6]	1052	0.550965	0.603612
(0.6, 0.7]	731	0.641563	0.678523
(0.7, 0.8]	219	0.736235	0.753425
(0.8, 0.9]	28	0.828696	0.714286

Dominance differential used by the predictive model, per minute: (significant strikes landed difference) + 5 x (knockdowns difference) + 2 x (takedowns difference) + 2 x (submission attempts difference) + (control seconds difference)/60, divided by fight minutes. The sign of this differential agrees with the official winner in 85.6% of bouts.

3. Card-quality index and supply facts

Positions are computed on each event date from pre-fight predictive ratings among fighters active in the prior 540 days in that division; 'top 10' = positions 1-11 (champion plus ten).

year	card_type	events	bouts_per_card	top10_bouts_per_card	top15_bouts_per_card	share_cards_zero_top10	share_cards_zero_top15	ranked_sh
2022	Fight Night	29	12	0.69	1.483	0.414	0.103	
2022	Numbered	13	12.538	2.308	3.077	0.077	0.077	
2023	Fight Night	29	11.793	0.793	1.345	0.31	0.069	
2023	Numbered	14	12.714	1.857	2.643	0.071	0	
2024	Fight Night	28	12.179	0.679	1.25	0.536	0.143	
2024	Numbered	14	12.571	2.214	3.143	0.143	0	
2025	Fight Night	30	11.9	0.633	1.4	0.433	0.167	
2025	Numbered	13	12.692	2.462	3.538	0.077	0	
2026	Fight Night	25	12.64	0.88	1.4	0.32	0.12	
2026	Numbered	8	12.375	2.125	2.875	0	0	

Supply facts: fighters inside a division top 11 on January 1 of each year, their bouts that year, and the share against another top-11 fighter.

4. REAL resume board: methodology v1.0 (generated from the live configuration)

REAL Fighter Rankings: Methodology, version 1.0

Results, Evidence, Analytics, Ledger. Data through 2026-09-26. This document is generated from the live configuration (config/weights.yaml) and the audit trail (outputs/audit_top30.csv) on every rebuild.

1. What the rank means

A resume rank: who has earned the position as of today, updated automatically each week. The single principle behind every rule: **a fighter is ranked on how he performed against the fighters he faced, and how good those fighters were.** The goal is the most defensible board possible, not agreement with any other board. It is not a prediction of who would win tomorrow; that is a separate model (section 8, and the Prediction page). Champions (C), interim champions (IC) and reserved spots (R: former champions who vacated with an injury and are owed a title shot) sit above the numbered board with their metrics shown. Contenders are numbered 1 to 30.

2. Data and how far to trust it

Source	What it provides	Coverage	Reliability
UFCStats (official UFC statistics), via the Greco1899 open scraper	Every UFC bout: result, method, round, time, judges' scorecards, round-by-round strikes, knockdowns, takedowns, submission attempts, control time	8,911 bouts, 1994 to 2026-09-26; round stats for 99.8%; all three judges' cards for 98.6% of decisions (100% since 2005)	High for what it records. Strike counts are hand-coded and do not measure damage. Judges' cards are official but can be wrong.
Official UFC rankings history (martj42/ufc_rankings_history, every media-panel release Feb 2013 to June 2026, extended with weekly snapshots of ufc.com)	Each opponent's official rank on the day of the fight	534 releases; about 99% of ranked names matched to UFCStats	High; before Feb 2013 the model's own position is used instead
Hand-kept configuration files	Retirements and releases, documented injury layoffs, announced division moves, vacant titles, interim champions	As maintained, each entry carries its reason and source	Only as current as the last edit; every entry is listed in <code>config/</code>
Public boards (UFC media panel, Meta UFC Rankings, Sherdog, Fight Matrix, ESPN)	Comparison only; never an input to the score	Snapshots stored in <code>data/external/</code> with their dates	Used to find disagreements, not to copy

Known gaps: no pre-UFC records (debutants start at the same rating), no injury data beyond the hand-kept list, no contract or matchmaking information, and statistics before about 2001 are sparse.

3. How A + B = C: the pipeline, in order

1. **Resume rating.** Every UFC bout since 1994 is processed in date order. Each fighter's rating moves by $K \times (\text{actual score} - \text{expected score})$, where the expected score comes from the two ratings (Elo). Rules for scoring a result are in section 4.
2. **Eligibility.** A fighter must have fought within the active window, be on the roster, and be in a ranked division (section 6).
3. **Quality ledger.** Wins and losses are re-read for resume value (section 5).
4. **Score.** $\text{Score} = \text{rating weight} \times \text{scaled rating} + \text{ledger weight} \times \text{scaled ledger} - \text{form penalty}$. Both inputs are scaled within the division by their interdecile range: $(\text{value} - \text{median}) / (90\text{th percentile} - 10\text{th percentile})$.
5. **Head-to-head.** The winner of the latest meeting moves above the loser when close enough (section 7).
6. **Title cycle.** Recent title-fight challengers who lost step back from the top slots (section 7).
7. **Stability band.** The same board is rebuilt with nearby weights; the band is each fighter's 10th to 90th percentile position.
8. **Audit.** Every contender's placement records where the score put him and which rule moved him.

4. Scoring a single fight (the rating)

Situation	Winner's score (loser gets 1 minus this)	Why
Knockout, TKO or submission	1.0	A finish is a complete result
Decision	50% judges' cards + 50% fight statistics, never below 0.5 for the official winner	Judges alone can be wrong (Jones vs. Reyes); stats alone ignore what judges see. The official result always stands.
Judges' card, per judge	1-point margin (29-28, 48-47) = 0.6; 2 points = 0.8; 3+ points (30-27, 49-46, 50-45) = 1.0	29-28 and 48-47 are close; 49-46 is a clear win

Situation	Winner's score (loser gets 1 minus this)	Why
Fight statistics	Logistic of the winner's dominance per minute: significant strike difference + 5 x knockdowns + 2 x takedowns + 2 x submission attempts + control-time difference in minutes	Same formula as the validated predictive model

K = 60, and 1.5 x K for a fighter's first 5 UFC bouts. There is no rating decay for time off; inactivity is handled in section 6.

Ranks used by the rules below (top 3, top 5, quality-win tiers) are the **official** ranks on the fight date from 2013 on, and the model's own division position before that.

Other fight-level rules. A no-contest caused by a failed drug test counts as a loss for the fighter who failed (read from the official bout details). A bout taken on short notice (about 3 weeks or less, `config/short_notice.yaml`) counts 1.2x for a win and 0.5x for a loss.

Loss rules. A loss is **dominant** when it is a first-round finish, an early finish (first half of the scheduled rounds) while clearly behind on the stats, or a decision with 2 of 3 cards at 3+ points where the stats do not contradict the cards. A late finish while close on the stats (winner ahead by 1.5 or less per minute), a split or majority decision, or a decision scored 0.7 or less is **close**.

Loss	Rating cost	Why
Close loss to a top-5 fighter by someone outside the top 5	A gain of 10% of K	Proof of concept: you showed you belong at that level
Loss to a top-3 fighter or in a title fight, not dominant	15% of the normal drop (60% if the previous bout was also a loss)	Losing to the best is expected; a losing streak is not a one-off
Same, but dominant	75%	A blowout says the gap is real, even at the top (Della Maddalena vs. Makhachev)
First-round finish by a heavy favorite (75%+ pre-fight win probability)	100%	The real gap, confirmed; no need to run it back
Any other loss	100%	
First-round finish by the underdog	Both fighters move 70% as much	Quick early finishes can be flukes

5. The quality ledger

A **quality win** is valued by the opponent's official rank going into the fight: champion 2.0, ranked 1-5 1.5, 6-10 1.0, 11-15 0.5. An unranked opponent with 8+ UFC wins and a winning UFC record is worth 0.25. Beating four top-10 fighters is worth more than beating eight fighters ranked 11-15. Every ledger item is weighted by its age:

Age of the result	up to 3 years	up to 5 years	up to 10 years	up to 15 years
Weight	1.0	0.6	0.3	0.1

Ledger item	Value	Window
Quality win	+1.0	15 years, age-weighted
Proof-of-concept loss (close loss to a top-5 fighter)	+0.5	15 years, age-weighted
Dominant loss	-1.0	last 3 years
Any other loss to someone outside the top 5	-1.0	last 3 years

Entrenched (shown as E) = 4+ wins over top-10 opponents, or 5+ over top-15 opponents, in 15 years. Activity alone earns nothing: a fighter who takes many fights and loses to non-elite opponents gives the ledger back.

6. Eligibility, form and division

- **Inactivity.** No penalty for the first 365 days; up to 50 rating points by 540 days; off the board after that. Documented injury layoffs (`config/layoffs.yaml`) carry no penalty and stay eligible up to 730 days.
- **Form (last five UFC bouts).** Subtracted from the score: 2-3: 0.15, 1-4: 0.6, 0-5: 0.8. A 2-3 is a warning; 1-4 counts seriously against a fighter. A fighter with a negative last five also gets no head-to-head lift.

- **Division.** Two straight bouts in a division settle it. Otherwise the division fought in most over the last 3 years, with ties going to the division of the most recent win. Title holders are ranked in their title's division. Announced moves are in `config/division_overrides.yaml`, each with its reason.
- **Roster.** Retirements and releases are removed (`config/roster_exclusions.yaml`).

7. Matchmaking reality rules

- **Head-to-head.** If a fighter beat someone in their most recent meeting within 3 years and sits no more than 3 places below him (6 if the fight was in the last 12 months), he moves directly above him.
- **Title cycle.** A challenger who lost a title fight in the last 270 days is placed no higher than #4: still close, but the champion is fighting someone else next. He earns his way back with 1 win over a top-10 opponent or 2 wins of any kind. A champion who lost the belt is exempt (immediate rematches are common). Anyone that challenger beat in the last year stays below him.
- **Head-to-head details.** A close win (split or majority decision, or a fight scored as close) more than 12 months old settles nothing, and a fighter with a negative last five gets no head-to-head lift.
- **Reserved spots.** Former champions who vacated because of injury are listed as R above the numbered board (`config/reserved.yaml`).

8. Validation

Agreement with the public boards (UFC contenders only, champions removed): our average gap is 1.6 to 1.9 places; the public boards differ from each other by 0.9 to 1.6. Disagreement is expected and reported, not removed: `outputs/compare_flags.csv` lists every large gap with its cause.

The separate predictive model (performance-adjusted Elo) scores 61.2% accuracy and 0.6621 log loss on 3,390 held-out bouts from 2020 on, against 58.1% for results-only Elo and 65.2% for the betting market (2014-2023).

Forward check of the resume board. Boards were rebuilt as they stood before each of the last 127 events. In 226 bouts between two fighters on the same board, the higher-placed fighter won 54.4% of the time; on the 204 of those bouts where the official board ranked both, ours was right 55.4% and the official board 52.0%; the prediction model picked 62.4%. Ranked-versus-ranked bouts are matched to be close, so every board sits near a coin flip on them; the differences are within sampling error. These snapshots use today's rules, so they are in-sample; the true forward test starts at the v1.0 freeze.

9. Worked examples (from this rebuild's audit trail)

Division	Fighter	Final	How he got there	Rating term	Ledger term	Form	Ledger detail	Last 5
Bantamweight	Mario Bautista	#5	score order #5	+0.48	+0.23	-0.00	+3.6 QW +0.0 proof -1.0 blowout -0.0 weak	4-1
Bantamweight	Cory Sandhagen	#6	score order #6	+0.64	+0.21	-0.15	+5.3 QW +0.0 proof -2.0 blowout -1.0 weak	2-3

Welterweight	Kevin Holland	#24	score order #24	+0.31	-0.11	-0.00	+1.8 QW +0.0 proof -2.0 blowout -3.0 weak	3-2
Flyweight	Brandon Moreno	#6	score order #4; title cycle -> #6	+0.36	+0.29	-0.00	+6.8 QW +0.0 proof -0.0 blowout -1.0 weak	3-2

Division	Fighter	Final	How he got there	Rating term	Ledger term	Form	Ledger detail	Last 5
Lightweight	Max Holloway	#2	score order #1; head-to-head -> #2	+0.93	+0.63	-0.00	+8.4 QW +0.0 proof -1.0 blowout -0.0 weak	3-2

10. How REAL compares with published rating systems

Practice (source)	REAL v1.0
Separate resume ranking from prediction (NCAA NET vs KenPom; Fight Matrix)	Met: two systems, two pages
Margin of victory from the judges' rounds (BoxRec)	Met, blended 50/50 with fight stats
Partial credit for close results (Fight Matrix split-decision scoring)	Met: card margins and close-fight rules
Winner stays above loser for a period (BoxRec, 36 months)	Met in a narrower form: head-to-head rule
Losses in the biggest fights cost less (FIFA: knockout-stage losses cost nothing)	Met: loss protection tiers
Out-of-sample validation against baselines and the market (Holmes et al. 2023; Tennis Elo)	Met for the prediction model; started for the resume board
Per-fighter uncertainty (Glicko RD, TrueSkill)	Partly met: stability bands cover weights, not sample size
Margin-of-victory autocorrelation correction (FiveThirtyEight)	Not yet
Constants fitted to data rather than set by judgment	Not yet: set by stated principle, then checked
Versioned method and changelog (FIFA, BoxRec, FiveThirtyEight)	Met from v1.0

11. Limits and open decisions

- Pre-UFC records and betting odds after 2023 are not yet loaded (they require a manual Kaggle download); when added, pre-UFC records will set starting ratings and judge debut opponents' quality, never award ranking credit, and odds will define 'heavy favorite' instead of the model's own probability.
- Missed weight is not recorded in the fight data and is not yet used.
- Division overrides, injuries and retirements are hand-kept and need weekly review.
- Weights and thresholds were set by stated judgment and checked against the public boards; they have not been fitted to any outcome.
- Card-quality and matchmaking analyses use the predictive model's positions, not these boards.

12. Changelog

- **1.0 (Oct 1, 2026).** Method frozen for forward grading. Official rank at fight time (2013+); tiered quality wins; proof-of-concept credit for close losses to top-5 fighters; early-finish and war rules; drug-test overturns count as losses; short-notice credit; last-five form penalty; division, head-to-head, title-cycle and reserved-spot rules; audit trail; prediction model published separately.
- **0.x (Sept 29-30, 2026).** Composite of six percentile dimensions, replaced after review because four dimensions carried no ranking signal and losses were counted three times.

Head-to-head moves applied

- Bantamweight: Raoni Barcelos moved above Payton Talbott (won 2025-01-18)
- Bantamweight: Sean O'Malley moved above Song Yadong (won 2026-01-24)
- Bantamweight: Raoni Barcelos moved above Montel Jackson (won 2026-04-25)
- Bantamweight: Raul Rosas Jr. moved above Raoni Barcelos (won 2026-09-26)
- Featherweight: Pat Sabatini moved above Joanderson Brito (won 2025-04-05)
- Featherweight: Dooho Choi moved above Daniel Santos (won 2026-05-16)
- Featherweight: Pavel Andrusca moved above Nathaniel Wood (won 2026-09-05)
- Heavyweight: Denzel Freeman moved above Marek Bujlo (won 2025-11-22)
- Heavyweight: Tyrell Fortune moved above Marcin Tybura (won 2026-03-28)
- Heavyweight: Josh Hoke moved above Curtis Blaydes (won 2026-04-11)
- Light Heavyweight: Modestas Bukauskas moved above Christian Edwards (won 2026-05-16)
- Light Heavyweight: Alonzo Menifield moved above Iwo Baraniewski (won 2026-09-19)
- Lightweight: King Green moved above Grant Dawson (won 2023-10-07)
- Lightweight: Renato Moicano moved above Benoit Saint Denis (won 2024-09-28)
- Lightweight: Ilia Topuria moved above Charles Oliveira (won 2025-06-28)
- Lightweight: Mauricio Ruffy moved above Rafael Fiziev (won 2026-01-31)
- Lightweight: Charles Oliveira moved above Max Holloway (won 2026-03-07)
- Lightweight: Kody Steele moved above Dom Mar Fan (won 2026-05-02)
- Middleweight: Marco Tulio moved above Tresean Gore (won 2025-04-12)
- Middleweight: Khamzat Chimaev moved above Dricus Du Plessis (won 2025-08-16)
- Welterweight: Ian Machado Garry moved above Carlos Prates (won 2025-04-26)
- Welterweight: Jack Della Maddalena moved above Belal Muhammad (won 2025-05-10)
- Welterweight: Ramiz Brahimaj moved above Austin Vanderford (won 2025-10-04)
- Welterweight: Michael Morales moved above Sean Brady (won 2025-11-15)
- Welterweight: Yaroslav Amosov moved above Neil Magny (won 2025-12-13)
- Welterweight: Gabriel Bonfim moved above Belal Muhammad (won 2026-06-06)
- Welterweight: Jean-Paul Lebosnoy moved above Seokhyeon Ko (won 2026-07-18)
- Welterweight: Uros Medic moved above Daniel Rodriguez (won 2026-08-01)
- Women's Bantamweight: Joselyne Edwards moved above Norma Dumont (won 2026-04-25)
- Women's Bantamweight: Ketlen Vieira moved above Jacqueline Cavalcanti (won 2026-05-16)
- Women's Bantamweight: Ailin Perez moved above Norma Dumont (won 2026-09-26)
- Women's Flyweight: Natalia Silva moved above Rose Namajunas (won 2026-01-24)
- Women's Flyweight: JJ Aldrich moved above Jamey-Lyn Horth (won 2026-04-18)
- Women's Flyweight: Alexa Grasso moved above Manon Fiorot (won 2026-09-12)
- Women's Strawweight: Ketlen Souza moved above Yazmin Jauregui (won 2024-09-14)
- Flyweight: Alexandre Pantoja #1 -> #4 (lost a title fight 2026-09-19; the champion fights someone else next)
- Flyweight: Tatsuro Taira #3 -> #5 (lost a title fight 2026-05-09; the champion fights someone else next)
- Flyweight: Brandon Moreno #4 -> #6 (lost to a fighter moved by the title-cycle rule in the last year)

- Heavyweight: Alex Pereira #1 -> #4 (lost a title fight 2026-06-14; the champion fights someone else next)
- Light Heavyweight: Jiri Prochazka #2 -> #4 (lost a title fight 2026-04-11; the champion fights someone else next)
- Welterweight: Ian Machado Garry #3 -> #4 (lost a title fight 2026-08-15; the champion fights someone else next)

8. Benchmark review against published rating systems

Benchmark review: REAL Fighter Rankings against published rating systems

Compiled Oct 1, 2026 from the sources listed at the end. This is the internal review that fed METHODOLOGY.md section 10.

Comparable methods

1. Fight Matrix (MMA). Publishes four systems side by side: Standard Elo ($K=170$, start 1000), Modified Elo (K varies with experience, +15 home bonus), Glicko-1, and Whole-History Rating. Split and majority decisions count as partial results (0.667/0.333 and 0.833/0.167). Inactive fighters lose rating progressively and can win most of it back in their first two comeback fights; in the Glicko version, rating deviation rises with inactivity to a cap of 230. Opponent strength uses a "540 Opponent Metric" over a 1,080-day window. Updated weekly. No accuracy figures published.
2. BoxRec (boxing). Whole-History Rating, a Bradley-Terry model refit over every fighter's full history. Each result is a fraction: stoppage 1.0; without scorecards UD 0.875, MD 0.55, SD 0.45; with scorecards, the average judge margin per round. Decisions in bouts shorter than 12 rounds are down-weighted by $(\text{rounds}/12)^2$. New boxers start from seeded prior bouts; inactivity adds weak prior bouts each year, pulling the rating toward the base. Rule: for 36 months a winner stays ranked above the loser.
3. FIFA World Ranking (SUM, since 2018). $P = P_{\text{before}} + I(W - W_e)$, $W_e = 1/(10^{-(\text{dr}/600)} + 1)$. Importance I from 5 to 60 by match type. A knockout-stage loss at a final tournament costs nothing. Shootout: 0.75 winner, 0.5 loser. No margin of victory, no decay.
4. World Rugby. Points exchange (gain = opponent's loss), 3-point home handicap, 1.5x for wins by more than 15 points, World Cup exchanges doubled, movement per match capped. No decay.
5. FiveThirtyEight NFL Elo (public code). $K=20$, home field 65. Margin multiplier = $\ln(\text{margin} + 1) \times 2.2 / (\text{winner Elo difference} \times 0.001 + 2.2)$, the second term being the autocorrelation fix so favorites are not over-rewarded for routs. Between seasons ratings regress one third toward 1505.
6. Glicko/Glicko-2 (Glickman) and TrueSkill (Microsoft, 2006). Each rating carries a deviation (uncertainty) that grows with inactivity; Glicko-2 adds volatility. TrueSkill models skill as a normal distribution and ranks on the conservative $\mu - 3\sigma$.
7. Tennis Elo (Sackmann). Overall and surface ratings blended 50/50; after a long absence the rating drops and post-return matches are weighted more; validated against ATP/WTB rankings with the Brier score.
8. Colley, Massey, NCAA NET. Colley uses wins and losses only (no margin, to remove the incentive to run up scores); Massey fits point margins; Devlin and Treloar (JQAS 2018) unify Markov, Massey and Colley and test with 10-fold cross-validation over 33 seasons. The NCAA separates results-based metrics (NET, Strength of Record) from predictive ones (KenPom, BPI).
9. Holmes, McHale and Zychaluk (International Journal of Forecasting, 2023). Markov-chain simulation of UFC fights trained 2001-2017, tested on 2018: 61.8% accuracy vs 61.2% for bookmakers; a Bradley-Terry benchmark scored 54.1%.
10. CMU statistics capstone (2025). Crossed random-effects logistic model, trained 2016-2022, tested 2023-24: 68.4% against a 66.7% market-favorite baseline.

Comparison table

Method	Margin of victory	Opponent strength	Recency / decay	Inactivity	Uncertainty	Validation	Published
REAL v1.0	Cards 50% + stats 50%	Elo + official rank tiers	Ledger weights 1/0.6/0.3/0.1; last-five penalty	Grace, injury exemption	Weight-perturbation bands	Predictive Elo 61.2% vs market 65.2%; resume board 3-year rebuild 54.4%	Site, METHODOLOGY.md, audit trail
Fight Matrix	Decision type	Elo + 540 metric	Recent weighted	Progressive decline	Glicko RD	None published	FAQ, weekly
BoxRec	Judge margin per round	WHR full refit	Implicit	Prior pulls to base	None shown	None published	Wiki formula
FIFA SUM	None	Expected result	None	None	None	None	Full PDF
World Rugby	1.5x if >15	Rating gap	None	None	None	None	Explainer
FiveThirtyEight Elo	Log margin + autocorrelation fix	Elo	Season regression	Season regression	None	Calibration	Code + method
Glicko / TrueSkill	None	Bayesian	Dynamics term	Deviation grows	Core feature	Academic	Papers
Tennis Elo	None	Elo	Variable K	Post-return reweight	None	Brier vs ATP	Blog
Colley / NET	None / efficiency	Linear system / quadrants	None	n/a	None	Cross-validation	Paper / NCAA
Holmes et al.	Simulated stats	Bayesian GLMs	Train/test split	n/a	Probabilistic	Out-of-sample vs bookmakers	Journal

Best practices and REAL's status

Practice	Status	Why
Separate resume ranking from prediction	Met	Two systems, two pages
Validate forward in time, out of sample	Met for prediction; started for resume board	Resume rebuild is in-sample until the v1.0 freeze
Score probabilities (log loss, Brier, calibration), not just picks	Met for prediction	Resume board reports only pick accuracy
Compare to market and naive baselines on the same fights	Partly met	Market yes; a "favorite wins" baseline not reported
Per-fighter uncertainty (RD, sigma)	Partly met	Stability bands show weight sensitivity, not sample size
Correct margin-of-victory autocorrelation	Not met	Dominance inputs have no favorite-adjusted damping
Bounded, documented asymmetric protections	Partly met	Specified, but pool-level inflation not checked
Minimum-sample or provisional rules	Not met	One UFC bout makes a fighter eligible
Inactivity through uncertainty rather than exemptions	Partly met	Injury exemptions are hand-kept
Log every rule-based placement	Met	audit_top30.csv records score order and each rule move
Versioned methodology and changelog	Met from v1.0	METHODOLOGY.md generated from config; VERSION file
Constants fit on held-out data	Partly met	Prediction model grid-searched; resume constants set by stated principle

Five highest-value changes for v1.1

1. Per-fighter uncertainty (Glicko-style deviation), provisional status under a minimum fight count, intervals added to the stability bands.
2. Forward validation of the resume board on post-freeze bouts with log loss and Brier, against a "favorite wins" baseline and the official board on identical bouts.

3. Damp the dominance term for favorites (FiveThirtyEight factor) and check that cards plus stats do not double count the same dominance.
4. Fit the hand-set constants (loss protection 15%/75%, ledger weights, 50/50 blend) on held-out log loss, or refit with a whole-history model as a retrospective check.
5. Keep the version number, changelog and placement log public with each weekly release.

9. Known limitations and open items (author's own list)

1. Resume-board constants (loss protection 15%/75%, ledger tier values, age weights, form penalties, head-to-head and title-cycle windows) were set by stated principle and checked for sensitivity; they were not fit to data. The predictive model's parameters were grid-searched on 2010-2019 and tested once on 2020-2026.
2. The resume board's forward check uses boards rebuilt with today's rules, so it is in-sample; true forward grading starts with bouts after Oct 1, 2026.
3. No pre-UFC records: debutants start at the same rating. No betting odds after Dec 2023, so 'heavy favorite' uses the model's own probability. Both are planned for v1.1 from public datasets.
4. Hand-kept configuration (retirements, injuries, vacated titles, division moves, short-notice bouts) is reviewed weekly by a scheduled process that proposes changes for the author's approval; each entry carries its source.
5. Official UFC rankings history matched about 99% of ranked names to UFCStats names; 13 historical names were unmatched and treated as unranked.
6. Judges' scorecards cover 98.6% of decisions (100% since 2005). Strike counts are hand-coded by the official provider and do not measure damage.
7. 25 duplicate bouts (two Noche UFC cards listed under two names by the scraper) were found and removed on Sept 30, 2026; all numbers in this package postdate that fix.
8. Legal: 'REAL Fighter Rankings' is a new name chosen Sept 30, 2026 after a trademark and right-of-publicity review of the earlier working name; the site carries a non-affiliation disclaimer and uses no UFC marks, logos or fighter likenesses.

10. Data sources and licenses

- UFCStats.com (official UFC statistics provider), via Greco1899/scrape_ufc_stats (GitHub), refreshed after every event. Fields: results, method, round, time, judges' cards, round-by-round strikes, knockdowns, takedowns, submission attempts, control time.
- martj42/ufc_rankings_history (GitHub): every official media-panel ranking release Feb 4, 2013 to June 16, 2026 (Kaggle twin is CC0). Extended with snapshots of ufc.com/rankings.
- jansen88/ufc-data (GitHub): closing odds Nov 2014 to Dec 2023 (3,499 bouts matched), originally from betmma.tips.
- Public boards for comparison: ufc.com/rankings (media panel and Meta), sherdog.com, fightmatrix.com, espn.com.

- The UFC's own announcements used for context: Meta UFC Rankings transition (June 22, 2026); IBM Insights Engine partnership (Nov 2024); Paramount+ schedule of 13 numbered events and 30 Fight Nights per year (2026).
